This wearable LED device addresses this need with three key innovations: 1. Temperature Sensing for KOA Phenotypes Equipped with temperature sensors, the device assesses knee joint temperature changes, enabling differentiation KOA phenotypes for targeted treatments. 2. Tri-Wavelength LED with Adjustable Illumination Our animal studies show each wavelength targets specific knee tissues: synovitis, tendons, or cartilage. The three-chip LED allows independent activation of each wavelength, customizing treatment based on tissue involvement and KOA phenotype. 3. AI-Driven Personalized Protocols with Remote Support The AI system adjusts LED settings dynamically, based on patient-specific data from studies, to optimize outcomes. Patients can also scan a QR code for customized rehab advice and virtual consultations. This device provides a scientifically validated, user-friendly, and individualized solution, surpassing current products lacking multi-wavelength and AI capabilities.</p>

AI-based Cloud Platform System for Intelligent Sensing and Safety Monitoring of Elevators and Escalators 基于AI的电扶梯智能感知 安全監測云平台系統	1D-A16	Tryptophan sulfonate: a new chemical marker for accurate and efficient inspection of sulfur-treated food products Product Description: Plastaway is an innovative microfluidics-based lab-on-a-chip designed for rapid, cost-effective detection of micro/nano-plastics (MNPs) pollution. Addressing the limitations of traditional MNP detection methods, which are often costly, time-consuming, and require specialised expertise, Plastaway enriches, isolates, and labels MNPs efficiently within one hour. This unique platform utilises microfluidic technology integrated with fluorescent microscopy, ensuring high sensitivity, precision, and ease of use. The lab-on-a-chip's compact and user-friendly design makes it suitable for a wide range of applications, including environmental monitoring, food and beverage testing, and cosmetic safety assessments. With successful pilot trials on polluted seawater, our lab-on-a-chip has demonstrated robust reliability, positioning Plastaway as a leader in MNP detection technology. Our invention aims to empower industries, research institutions, and environmental non-governmental organisations (NGOs) to address the urgent global challenge of plastic pollution, thus fostering more informed decision-making and sustainable practices across various sectors.	1D-B01

Virtual Construction Safety Assistant 虛擬建築安全助理	1D-A28	Automatic Screening System for Mild Cognitive Impairment and Dementia with Auditory Tasks Product Description: The intelligent medication management solution project aims to improve the medication compliance of the target population through the IoT intelligent medicine boxes and data-driven systems.	1D-B02
ManyPlus Predictive Healthcare Intelligence	1D-A30		
Mountain Rescue App (MRA) & Artificial Intelligence assisted Drone Image Analysis Software (AI-DIAS)	1D-A32	Through digitization, families can feel more at ease, and drug R&D companies can complete new drug trials more efficiently at a lower cost. This holistic solution targets the issues of patients forgetting to take medication, repeating medication or taking the wrong medication. Poor patient efficacy and the high cost of new drug R&D trials for drug institutions can also benefit from this idea, which can bring more precise health management to patients, more efficient clinical trial methods for new drugs to pharmaceutical institutions, and reduction of drug waste. The advantages of our project lie in the ability to automatically detect, manage, and operate without geographical or time limitations, as well as integrate multi-party collaboration.

UV Sonic Toothbrush with Titanium Dioxide Toothpaste	1D-A44		
EcoLight Irrigation	1D-A46	A composition for treating rheumatoid arthritis Product Description: Our product enhances lung radiotherapy by automating the analysis of patient CT images and simplifying clinical procedures. With few clicks, it identifies organs and generates lung ventilation and perfusion maps, providing a comprehensive visual representation of lung function. This streamlined process aids clinicians in making informed treatment decisions, improving patient outcomes. The product employs cutting-edge image processing algorithms and AI techniques to ensure high accuracy and consistency. It features a user-friendly interface, a powerful backend, and 3D visualization capabilities. The automation of manual tasks reduces workload and minimizes human error. With functionality and user experience in mind, the product is designed with compatibility with major operating systems and distributed digitally, reducing environmental impact. Its innovative combination of automation, advanced visualization, and broad accessibility makes it a valuable tool in lung radiotherapy. The product enhances precision and effectiveness, contributing to improved patient care and deserving of recognition and awards.	1D-B03

Alphabetical List of Exhibitors

I-well Home Product Description: In view of the raise of children developing short-sightedness in recent years, we would like to develop a device to help monitoring the health of the eyes. A cap to control and monitor user's sight condition to prevent the development of short-sightedness. The helmet has break reminder, light detector, distance reminder as the monitor.	1D-B04	e-SmartPort Platform (eSPP)	1D-B16
		Wireless Connection to Field Equipment for control and monitoring	1D-B17
		Intrusion Detected Continuous Re-authentication (IDCRA) Technology	1D-B18
Flavan-3-OL Analogs and Anti-inflammatory Activity Product Description: This invention integrates gallium nitride (GaN) chips into the design of high-performance power converters with low gate driver stray inductance and low switching loss. An insulated metal substrate (IMS) printed circuit board (PCB) design is utilized to lower the thermal resistance while ensuring electrical isolation. The gate drive has small ringing and voltage overshoot, which ensures the realization of smooth switching characteristics of GaN switches. Compared with insulated-gate bipolar transistor (IGBT), silicon-based metal-oxide-semiconductor field-effect transistor (MOSFET), or silicon carbide (SiC) MOSFET converters, the invented GaN high-electron-mobility transistor (HEMT) converter has higher efficiency, higher power density, and higher switching frequency. Compared with GaN converters at the same power level, the invention has better drive performance and lower cost to promote the commercialization of GaN-HEMT power converters. It can be applied in various wireless power transfer facilities, including wireless charging for electric vehicles and other high-frequency high-power-density wireless charging scenarios.	1D-B05	Refuse Bin Monitoring System	1D-B19
		Kvell Platform	1D-B20
		Mama-room booking system	1D-B21
		WISIO platform	1D-B22

		Yuchi Expansion Bolt	1D-B27
Social Robot Product Description: More than half of children and adolescents aged 5 to 17 do not meet the World Health Organization's recommendation of at least 60 minutes of moderate- to vigorous-intensity physical activity daily. To address this issue, the FitFun 60 app is designed to help students develop a healthy lifestyle by connecting to sports kits and showcasing a variety of fun physical activities, particularly within the school environment. The app records all students' physical activities and requires a connection to a smart heart rate monitor. It uses a QR code to identify and track students engaged in these activities in designated areas of the school, allowing PE teachers to monitor participation and provide encouragement for students' efforts.	1D-B06	Deep Reinforcement Learning System for Empowering Multi-robot Flocking through Effective Communication in Complex Environments 複雜環境下多機器人有效溝通的深度強化學習系統	1D-B28
		Ellipse compass with adjustable major and minor axes	1D-B29
		Decentralized Authentication of Anti-counterfeiting QR codes using Vision transformer-based Federated Learning 基於Vision Transformer的聯邦學習架構對防偽二維碼進行去中心化認證	1D-B30
Radix Truss-ster	1D-B07	Medical AI Preserving Data Privacy	1D-B31
Scameter Series	1D-B08	The method for preparing rPVC composites from composite PVC waste and the application of the resulting products	1D-B32
Automatic Diamond Color Grading	1D-B09	Artverse	1D-B33
CryptoTrace	1D-B10	Highly Integrated Wireless Ultrasonic Motor System for Fully Enclosed Environment	1D-B34
The Co-electroplating Sn-Bi Alloy Solder for 3D-IC Low Temperature Bonding	1D-B11	Myopia Control Cap	1D-B35
XRCC — Extended Reality Content Creation Suite	1D-B12	Last-Centimeter Drone Delivery in Urban Environments	1D-B36
System and Method for AI Banner Generation Combining Design Intelligence and Data Intelligence	1D-B13	Fitfun 60	1D-B37
AI in Assisting Crop Pest and Disease Control	1D-B14	Artificial Reef for Oyster Reef Restoration in Topological Approach	1D-B38
5G Cloud Robotics with Precise Positioning and Supercomputing Power for Smart Manufacturing	1D-B15	Wellness Navigator	1D-B39

Alphabetical List of Exhibitors

Wearable smart light-emitting diode(LED) device for knee osteoarthritis	1D-B40	A Highly Efficient Virus-Free Gene Knock-In System for CAR-T Cell Engineering	1D-C03
Coffee Waste Biochar for Wastewater Treatment	1D-B41	Product Description: Every year, approximately 1.6 billion tons of spent coffee grounds are produced globally. We are exploring the potential of transforming this waste into activated biochar, a powerful adsorbent for wastewater treatment.	
The microfluidic platform for rapid efficient separation and detection of micro/nanoplastics	1D-B42	This approach not only reduces costs associated with solid waste management but also creates materials that effectively absorb pollutants from water. The resulting biochar can provide additional nutrients for crops, promoting sustainable agriculture.	
Innovative Air Filter for VOCs Adsorption	1D-B43	Our research analyzes the effectiveness of coffee waste in removing various pollutants, including heavy metals, dyes, antibiotics, and pesticides. We focus on pretreatment methods (physical, chemical, and magnetic) to enhance the adsorption efficiency of coffee waste.	
High-efficiency GaN converter module for wireless power transfer facilities	1D-B44	By leveraging coffee waste, we aim to contribute to sustainable waste management practices and address environmental pollution challenges effectively.	
Sustainable Solar Panel - Luminescence Solar Concentrators Made of Upcycled Food Waste	1D-B45		
LungRT Pro:Advanced Radiotherapy Support System	1D-B46		
Flower shaped intelligent medicine box based on artificial intelligence algorithm analysis and medication behavior data analysis system	1D-B48	Nanodiamond Shield (NDS) for mechanically-induced bacterial killing	1D-C04
LEAPLUG™ Sulfur-based Flow Battery Energy Storage System	1D-C01	Product Description:	
Product Description: Elderly individuals with chronic diseases like high blood pressure face various challenges, including emotional impacts and difficulties managing dietary changes, which contribute to a more routine lifestyle requiring frequent check-ups and diet control. To address these issues, the Wellness Navigator app connects to health kits, enabling the elderly to monitor their body measurements and maintain good health. The app requires integration with devices like blood pressure monitors and can set up tailored reminders for users to record their readings. It analyzes the collected data and provides rewarding feedback, such as personalized recipes, to encourage regular monitoring and promote a healthy diet.		Problems	
		In sealed buildings, ventilation systems often require significant energy to bring in fresh outdoor air and dilute indoor CO2 concentrations. This process can lead to increased rates of disease transmission, upper respiratory symptoms, and impaired cognitive function, particularly affecting student learning performance in classrooms.	
		Design	
		We have developed a new generation of headrest covers functionalized with amine-containing molecules to capture CO2 from the surrounding air. Treated with an amine solution, the fibres pull in CO2, stabilizing and storing it on the textile surface.	
		Benefits	
		This CO2 cover's production process generates no toxic reagents and consumes minimal energy. It requires no special equipment, allowing for scalable production using existing textile machinery. Ultimately, it saves ventilation power and reduces the carbon footprint, promoting sustainable environmental development.	
Bioactive Decellularized Cell Sheet for Tissue Repair 用於組織修復的生物活性去細胞細胞片	1D-C02		
Product Description:			
Introduction			
Bacterial acids that erode tooth enamel can lead to gum disease, or periodontal disease, which affects the gum tissue and bone surrounding teeth. These bacteria thrive on plaque, a colourless and sticky film that accumulates due to inadequate cleaning. When not removed, plaque hardens into tartar.			
Our Invention			
We introduce the UV sonic toothbrush, a revolutionary tool in dental care. Utilizing high-frequency sonic technology, this toothbrush effectively removes plaque from tooth enamel and gums while being gentler than traditional rotating brushes.			
Key Features			
Titanium Dioxide (TiO2): Our toothpaste contains a purified form of TiO2 (E171) as a bacteria-killing agent.			
UV Light Activation: The UV light activates TiO2, enhancing its antibacterial properties through photocatalysis.			
Effectiveness			
Our research shows that the UV-mediated process can eliminate bacteria, germs, and microorganisms by up to 99%, significantly improving oral hygiene and reducing the risk of gum disease.			
		Harness the power of evolution to develop novel targeting Adeno-Associated Virus (AAV) and other vehicle for gene therapy 2.0	1D-C05
		Product Description: Our invention addresses the issue of volatile organic compounds (VOCs), such as formaldehyde, which can pollute both indoor and outdoor air. Traditional consumer-grade air cleaners often use chemical oxidation but can inadvertently release VOCs themselves.	
		Our innovative solution employs an adsorbent composed of silver nanoparticles attached to activated carbon. The silver ions catalyze the oxidation of organic compounds, enabling the activated silver ion filter to effectively capture VOC gases. When these pollutants contact the filter, formaldehyde is immobilized on the activated carbon surface through weak Van der Waals forces. This process results in an irreversible reaction that forms a strong chemical bond between the absorbent material and the target pollutant.	
		Applications include enhancing indoor air quality in homes and commercial spaces, while the benefits encompass effective VOC removal, improved health outcomes, and a reduction in air pollution, contributing to safer living environments.

<p>PRECISE Resistance Testing - Identify drug resistance profile amongst primary tumor sample to achieve Personalised Cancer Treatment 1D-C06</p> <p>Product Description: Introduction: Problems: With the world population projected to reach 9.8 billion by 2050, maximizing crop productivity is crucial. Traditional greenhouse technologies focus solely on adjusting light intensity, while photosynthetic efficiency relies on specific light wavelengths, particularly between 600-650nm. Solutions: Our invention features a dual-component spray system: 1) plant-derived oils that coat irrigation droplets to minimize water waste, and 2) an upcycled organic illuminated dye that red-shifts sunlight, enhancing photosynthesis. Features: The irrigation solution glows under sunlight, converting short-wavelength photons (blue and UV) into longer wavelengths (orange and red). This shift optimizes light for maximum photosynthetic potential, improving crop yields while utilizing luminescent particles derived from upcycled fruits and vegetables, reducing waste and losses for farmers.</p>	<p>An Intelligent Flexible Robotic System for Minimally Invasive Neurosurgery 1D-C09</p> <p>Product Description: Introduction Acoustic requirements in school buildings are essential for public spaces like theatres, classrooms, auditoriums, multi-purpose halls, and music rooms, necessitating careful architectural design that considers room shape, volume, finishing materials, and special spatial elements to meet stringent acoustic standards. Solution: Recycled Fibrous Composites for Sound Absorption To achieve optimal sound absorption in classrooms, we propose using screens made from recycled school uniform fibrous composites, which addresses acoustic needs while promoting sustainability through material recycling. Features of the Acoustic Panels Physical Parameters The acoustic panels are designed with key physical parameters such as thickness, surface mass, porosity, air permeability, and acoustic absorption coefficient. Layered Design The panels feature a front layer of low sound absorption fabric supplemented by a porous inner layer. Honeycomb Structure This inner layer incorporates a honeycomb structure that offers lower damping and improved sound absorption due to its less dense and more open internal configuration. Conclusion By integrating these panels, we can significantly enhance sound quality in classrooms, fostering a conducive learning atmosphere while contributing to environmental sustainability.</p>
<p>Regenerative Bioenhancers for Musculoskeletal Disorders 1D-C07</p> <p>Product Description: We propose an innovative solar energy-harvesting window that utilizes upcycled food waste to absorb stray UV light from sunlight and convert it into clean, renewable electricity. Key Features: Carbon Dots (CDs): The windows incorporate embedded Carbon dots in a resin matrix. When sunlight strikes the window, it absorbs UV light and generates visible light. Energy Collection: The emitted light is guided through total internal reflection to the edges of the window, where conventional photovoltaic cells capture the light and convert it into electricity. Circular Economy: Converting food waste into Carbon dots not only supports renewable energy generation but also contributes to sustainability. Benefits: Clean Renewable Energy: Provides a sustainable energy source for urban buildings. Utilization of Food Waste: Promotes waste reduction and recycling. Lower Electricity Bills: Helps reduce energy costs for building occupants. This innovative technology offers a practical solution for energy generation in urban settings, addressing both environmental concerns and energy efficiency.</p>	<p>EcoShield — Cycle to Convenience 1D-C10</p> <p>EcoShield— 新型可生物降解的 細菌纖維包裝材料 Product Description: An adjustable ellipse compass capable of accurately drawing elliptical curves at one end of the drawing rod.</p> <p>Smart Guardian - Creating a Secure Railway Through Discovery of Suspicious Objects 1D-C11</p> <p>PreLogging 1D-C12;1D-C14</p> <p>Smart inclusion: Bluetooth-based door pre-closing indicator for Hearing Impaired persons 1D-C13</p> <p>SparkVision 1D-C15</p> <p>Plant-Based & Sustainable Resins for Non-woven Applications 1D-C16</p>
<p>Macromolecular Proton Fraction Mapping Based on Spin-Lock MRI 1D-C08</p> <p>Product Description: Yuchi Industrial Co., Ltd., established in 2013, initially focused on producing invisible bars. Recognizing the limitations of traditional expansion screws, and developed the "Spiral Expansion Bolt".by 2016, secured patents in multiple regions, including Taiwan, China, Japan, the U.S., and the EU. To reduce the cost of screws, Yuchi created a specialized screw processing machine, allowing for global exports. The company prioritizes ongoing innovation, product quality, and durability, aiming to fulfill customer expectations.</p>	<p>Integrated Wireless Motor 一體化無線電機 1D-C17</p> <p>Wearable Smart Microneedle Device 穿戴式智慧微針裝置 1D-C20</p> <p>AI-powered Immunohistochemistry Image Analyzer for Medical Research, Diagnosis, and Prognosis 用於醫學研究、診斷和預後的人工智能驅動的免疫組化圖像分析儀 1D-C21</p> <p>Nano-photocatalytic Antifouling/anticorrosion Coating for Marine and Built Environments 於海洋和建築環境的納米光催化防污防腐塗層 1D-C22</p>
